- 3 x 7.5m standard Temperature Probes
- 1 licence Monitoring and alerting Software
- SMS Modem
- Getting Started Guide

Temperature Protector Package

Imagine you leave the office for the weekend, everything's fine Friday night, then 6pm Saturday your air conditioning system breaks down. You have no idea. Your air conditioning engineer has no idea. You walk in Monday morning to find that your servers are cooking beautifully!

There's a simple way to ensure this never happens to you. The Temperature Protector Package is a complete Temperature Monitoring Solution to make it affordable and easy to monitor and alert to rises in temperature in your server or computer rooms. The package takes about 15 minutes to set up and then you forget about it, safe in the knowledge that if there is a problem you'll get a warning and be able to do something before there's any impact on your users.

Flexible System

The Temperature Protector Package is supplied with 3 x 7.5m probes to enable monitoring of 3 different locations. The solution also easily allows the addition of extra units and probes to monitor other offices or to fit in with expansion.

Why use OPENXTRA

People at OPENXTRA will always give you honest friendly advice and we make the effort to get the answers to your questions. We allow you to purchase the way you want, and we deliver quickly and reliably.
